AS FURTHER MATHEMATICS

Paper 2 Statistics

Thursday 16 May 2019

Afternoon

Time allowed: 1 hour 30 minutes

Materials

- You must have the AQA formulae and statistical tables booklet for A-level Mathematics and A-level Further Mathematics.
- You should have a scientific calculator that meets the requirements of the specification. (You may use a graphical calculator.)
- You must ensure you have the other optional Question Paper/Answer Book for which you are entered (**either** Discrete **or** Mechanics). You will have 1 hour 30 minutes to complete **both** papers.

Instructions

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- You must answer each question in the space provided for that question. If you require extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do **not** write outside the box around each page.
- Show all necessary working; otherwise marks for method may be lost.
- Do all rough work in this book. Cross through any work you do not want to be marked.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 40.

Advice

- Unless stated otherwise, you may quote formulae, without proof, from the booklet.
- You do not necessarily need to use all the space provided.

TOTAL	

Answer **all** questions in the spaces provided.

- 1** The discrete random variable X has the following probability distribution function

$$P(X = x) = \begin{cases} \frac{5-x}{10} & x = 1, 2, 3, 4 \\ 0 & \text{otherwise} \end{cases}$$

Find $P(X \geq 3)$

Circle your answer.

0.15

0.2

0.3

- 2** A binomial hypothesis test was carried out at the 5% level of significance with the hypotheses

$$H_0 : p = 0.6$$

$$H_1 : p > 0.6$$

A sample of size 30 was used to carry out the test.

Find the probability that a Type I error was made.

Circle your answer.

Fiona is studying the heights of corn plants on a farm.

The summarised results are as follows:

Calculate a 96% confidence interval for the population mean of heights of corn plants on the farm, giving your values to one decimal place.

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

Turn over ►

4 The continuous random variable X has probability density function

$$f(x) = \begin{cases} \frac{4}{99}(12x - x^2 - x^3) & 0 \leq x \leq 3 \\ 0 & \text{otherwise} \end{cases}$$

4 (a) Find $P(X > 1)$

[3 marks]

4 (b) Show that $E(X^{-1}) = \frac{10}{11}$

[3 marks]

4 (c) Find $E(2X^{-1} - 3)$

[2 marks]

Turn over ►

- 5** The discrete random variable X has the following probability distribution function

$$P(X = x) = \begin{cases} \frac{1}{n} & x = 1, 2, \dots, n \\ 0 & \text{otherwise} \end{cases}$$

- 5 (a) (i)** Prove that $E(X) = \frac{n+1}{2}$

[3 marks]

- 5 (a) (ii)** Prove that $\text{Var}(X) = \frac{n^2 - 1}{12}$

[4 marks]

5 (b) State **two** conditions under which a discrete uniform distribution can be used to model the score when a cubic dice is rolled.

[2 marks]

Turn over ►

- 6** A company owns two machines, A and B , which make toys. Both machines run continuously and independently.

Machine A makes an average of 2 errors per hour.

- 6 (a)** Using a Poisson model, find the probability that the machine makes exactly 5 errors in 4 hours, giving your answer to three significant figures.

[2 marks]

- 6 (b)** Machine B makes an average of 5 errors per hour. Both machines are switched on and run for 1 hour.

The company finds the probability that the total number of errors made by machines A and B in 1 hour is greater than 8.

If the probability is greater than 0.4, a new machine will be purchased.

Using a Poisson model, determine whether or not the toy company will purchase a new machine.

[3 marks]

- 6 (c)** After investigation, the standard deviation of errors made by machine *A* is found to be 0.5 errors per hour and the standard deviation of errors made by machine *B* is also found to be 0.5 errors per hour.

Explain whether or not the use of Poisson models in parts **(a)** and **(b)** is appropriate.

[2 marks]

Turn over for the next question

Turn over ►

Mohammed is conducting a medical trial to study the effect of two drugs, A and B , on the amount of time it takes to recover from a particular illness.

The results are summarised in the table:

		Recovery time			
		1 week	2 weeks	3 weeks	Total
Drug	<i>A</i>	36	19	5	60
	<i>B</i>	21	24	15	60
	Total	57	43	20	120

7 (a)

[7 marks]

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and extend across the width of the page. There are no margins, text, or other markings on the paper.

7 (b) Interpret any association between recovery time and the drug used.

[2 marks]

END OF QUESTIONS

There are no questions printed on this page

*Do not write
outside the
box*

**DO NOT WRITE ON THIS PAGE
ANSWER IN THE SPACES PROVIDED**

Question number	Additional page, if required. Write the question numbers in the left-hand margin.
