

8.

Figure 1

Figure 1 shows a sketch of the curve C with equation $y = f(x)$.
 The curve C passes through the origin and through $(6, 0)$.
 The curve C has a minimum at the point $(3, -1)$.

On separate diagrams, sketch the curve with equation

(a) $y = f(2x)$, **(3)**

(b) $y = -f(x)$, **(3)**

(c) $y = f(x + p)$, where p is a constant and $0 < p < 3$. **(4)**

On each diagram show the coordinates of any points where the curve intersects the x -axis and of any minimum or maximum points.

Question 8 continued

10. The curve C has equation

$$y = (x+1)(x+3)^2$$

(a) Sketch C , showing the coordinates of the points at which C meets the axes. (4)

(b) Show that $\frac{dy}{dx} = 3x^2 + 14x + 15$. (3)

The point A , with x -coordinate -5 , lies on C .

(c) Find the equation of the tangent to C at A , giving your answer in the form $y = mx + c$, where m and c are constants. (4)

Another point B also lies on C . The tangents to C at A and B are parallel.

(d) Find the x -coordinate of B . (3)
