

4.

Figure 2

Figure 2 shows part of the curve with equation $y = f(x)$
 The curve passes through the points $P(-1.5, 0)$ and $Q(0, 5)$ as shown.

On separate diagrams, sketch the curve with equation

(a) $y = |f(x)|$ **(2)**

(b) $y = f(|x|)$ **(2)**

(c) $y = 2f(3x)$ **(3)**

Indicate clearly on each sketch the coordinates of the points at which the curve crosses or meets the axes.

6. The functions f and g are defined by

$$f : x \mapsto e^x + 2, \quad x \in \mathbb{R}$$

$$g : x \mapsto \ln x, \quad x > 0$$

- (a) State the range of f . **(1)**
- (b) Find $fg(x)$, giving your answer in its simplest form. **(2)**
- (c) Find the exact value of x for which $f(2x + 3) = 6$ **(4)**
- (d) Find f^{-1} , the inverse function of f , stating its domain. **(3)**
- (e) On the same axes sketch the curves with equation $y = f(x)$ and $y = f^{-1}(x)$, giving the coordinates of all the points where the curves cross the axes. **(4)**

Leave blank

Question 6 continued

Lined writing area for the answer to Question 6.

8. $f(x) = 7 \cos 2x - 24 \sin 2x$

Given that $f(x) = R \cos(2x + \alpha)$, where $R > 0$ and $0 < \alpha < 90^\circ$,

(a) find the value of R and the value of α . (3)

(b) Hence solve the equation

$$7 \cos 2x - 24 \sin 2x = 12.5$$

for $0 \leq x < 180^\circ$, giving your answers to 1 decimal place. (5)

(c) Express $14 \cos^2 x - 48 \sin x \cos x$ in the form $a \cos 2x + b \sin 2x + c$, where a , b , and c are constants to be found. (2)

(d) Hence, using your answers to parts (a) and (c), deduce the maximum value of

$$14 \cos^2 x - 48 \sin x \cos x$$
(2)
