Applications of Advanced Mathematics (C4) Paper A

4754A

Candidates answer on the Answer Booklet

OCR Supplied Materials:

- 8 page Answer Booklet
- MEI Examination Formulae and Tables (MF2)

Other Materials Required:

None

Friday 15 January 2010
Afternoon

Duration: 1 hour 30 minutes

INSTRUCTIONS TO CANDIDATES

- Write your name clearly in capital letters, your Centre Number and Candidate Number in the spaces provided on the Answer Booklet.
- Use black ink. Pencil may be used for graphs and diagrams only.
- Read each question carefully and make sure that you know what you have to do before starting your answer.
- Answer **all** the questions.
- Do **not** write in the bar codes.
- You are permitted to use a graphical calculator in this paper.
- Final answers should be given to a degree of accuracy appropriate to the context.

INFORMATION FOR CANDIDATES

- The number of marks is given in brackets [] at the end of each question or part question.
- You are advised that an answer may receive **no marks** unless you show sufficient detail of the working to indicate that a correct method is being used.
- The total number of marks for this paper is **72**.
- This document consists of **4** pages. Any blank pages are indicated.

NOTE

- This paper will be followed by **Paper B: Comprehension**.

Section A (36 marks)

- 1 Find the first three terms in the binomial expansion of $\frac{1+2x}{(1-2x)^2}$ in ascending powers of x . State the set of values of x for which the expansion is valid. [7]

- 2 Show that $\cot 2\theta = \frac{1 - \tan^2 \theta}{2 \tan \theta}$.

Hence solve the equation

$$\cot 2\theta = 1 + \tan \theta \quad \text{for } 0^\circ < \theta < 360^\circ. \quad [7]$$

- 3 A curve has parametric equations

$$x = e^{2t}, \quad y = \frac{2t}{1+t}.$$

- (i) Find the gradient of the curve at the point where $t = 0$. [6]

- (ii) Find y in terms of x . [2]

- 4 The points A, B and C have coordinates (1, 3, -2), (-1, 2, -3) and (0, -8, 1) respectively.

- (i) Find the vectors \overrightarrow{AB} and \overrightarrow{AC} . [2]

- (ii) Show that the vector $2\mathbf{i} - \mathbf{j} - 3\mathbf{k}$ is perpendicular to the plane ABC. Hence find the equation of the plane ABC. [5]

- 5 (i) Verify that the lines $\mathbf{r} = \begin{pmatrix} -5 \\ 3 \\ 4 \end{pmatrix} + \lambda \begin{pmatrix} 3 \\ 0 \\ -1 \end{pmatrix}$ and $\mathbf{r} = \begin{pmatrix} -1 \\ 4 \\ 2 \end{pmatrix} + \mu \begin{pmatrix} 2 \\ -1 \\ 0 \end{pmatrix}$ meet at the point (1, 3, 2). [3]

- (ii) Find the acute angle between the lines. [4]

Section B (36 marks)

- 6 In Fig. 6, OAB is a thin bent rod, with $OA = a$ metres, $AB = b$ metres and angle $OAB = 120^\circ$. The bent rod lies in a vertical plane. OA makes an angle θ above the horizontal. The vertical height BD of B above O is h metres. The horizontal through A meets BD at C and the vertical through A meets OD at E.

Fig. 6

- (i) Find angle BAC in terms of θ . Hence show that

$$h = a \sin \theta + b \sin(\theta - 60^\circ). \quad [3]$$

- (ii) Hence show that $h = (a + \frac{1}{2}b) \sin \theta - \frac{\sqrt{3}}{2}b \cos \theta$. [3]

The rod now rotates about O, so that θ varies. You may assume that the formulae for h in parts (i) and (ii) remain valid.

- (iii) Show that OB is horizontal when $\tan \theta = \frac{\sqrt{3}b}{2a + b}$. [3]

In the case when $a = 1$ and $b = 2$, $h = 2 \sin \theta - \sqrt{3} \cos \theta$.

- (iv) Express $2 \sin \theta - \sqrt{3} \cos \theta$ in the form $R \sin(\theta - \alpha)$. Hence, for this case, write down the maximum value of h and the corresponding value of θ . [7]

[Question 7 is printed overleaf.]

- 7 Fig. 7 illustrates the growth of a population with time. The proportion of the ultimate (long term) population is denoted by x , and the time in years by t . When $t = 0$, $x = 0.5$, and as t increases, x approaches 1.

Fig. 7

One model for this situation is given by the differential equation

$$\frac{dx}{dt} = x(1 - x).$$

- (i) Verify that $x = \frac{1}{1 + e^{-t}}$ satisfies this differential equation, including the initial condition. [6]
- (ii) Find how long it will take, according to this model, for the population to reach three-quarters of its ultimate value. [3]

An alternative model for this situation is given by the differential equation

$$\frac{dx}{dt} = x^2(1 - x),$$

with $x = 0.5$ when $t = 0$ as before.

- (iii) Find constants A , B and C such that $\frac{1}{x^2(1-x)} = \frac{A}{x^2} + \frac{B}{x} + \frac{C}{1-x}$. [4]
- (iv) Hence show that $t = 2 + \ln\left(\frac{x}{1-x}\right) - \frac{1}{x}$. [5]
- (v) Find how long it will take, according to this model, for the population to reach three-quarters of its ultimate value. [2]

Candidates answer on the Question Paper

OCR Supplied Materials:

- Insert (inserted)
- MEI Examination Formulae and Tables (MF2)

Other Materials Required:

- Rough paper

**Friday 15 January 2010
Afternoon**

Duration: Up to 1 hour

Candidate Forename		Candidate Surname	
--------------------	--	-------------------	--

Centre Number						Candidate Number				
---------------	--	--	--	--	--	------------------	--	--	--	--

INSTRUCTIONS TO CANDIDATES

- Write your name clearly in capital letters, your Centre Number and Candidate Number in the boxes above.
- Use black ink. Pencil may be used for graphs and diagrams only.
- Read each question carefully and make sure that you know what you have to do before starting your answer.
- Answer **all** the questions.
- Do **not** write in the bar codes.
- Write your answer to each question in the space provided, however additional paper may be used if necessary.
- You are permitted to use a graphical calculator in this paper.
- Final answers should be given to a degree of accuracy appropriate to the context.

INFORMATION FOR CANDIDATES

- The number of marks is given in brackets [] at the end of each question or part question.
- The insert contains the text for use with the questions.
- You may find it helpful to make notes and do some calculations as you read the passage.
- You are **not** required to hand in these notes with your question paper.
- You are advised that an answer may receive **no marks** unless you show sufficient detail of the working to indicate that a correct method is being used.
- The total number of marks for this paper is **18**.
- This document consists of **4** pages. Any blank pages are indicated.

- 1 A Caesar cipher uses a shift of 11 places. Using lines 36 and 37, write down the shift for the decoding cipher in this case. [1]

.....

- 2 Using lines 143 to 146, write out the first 16 letters of the plaintext message corresponding to the ciphertext message on lines 97 to 101. [1]

.....

.....

.....

- 3 Table 4 shows an encoding cipher. Complete the table below to show part of the decoding cipher. [2]

Ciphertext	<i>A</i>	<i>B</i>	<i>C</i>	<i>D</i>	<i>E</i>
Plaintext					

- 4 Line 137 says ‘in string S_2 , the encoded form of the letter *A* is *N*’. Give two reasons why this is a sensible suggestion. [2]

.....

.....

.....

.....

- 5 Lines 105 and 106 say ‘Taken together, these two shifts suggest that the keyword has length 2 or 4’. Explain why this is the case. [2]

.....

.....

.....

6 Lines 107 and 108 say ‘a keyword of length 2 would form a less secure cipher than one of length 4’. Explain why this is true. [2]

.....
.....
.....

7 A long passage is encoded using the Vigenère cipher with keyword **ODE**. Write down the different ways in which the plaintext word **AND** could appear in the ciphertext. [2]

.....

8 A passage of plaintext is encoded by using the Caesar cipher corresponding to a shift of 2 places followed by the Vigenère cipher with keyword **ODE**.

(i) The first letter in the plaintext passage is **F**. Show that the first letter in the transmitted text is **V**. [1]

.....
.....

(ii) The first four letters in the transmitted text are **VFIU**. What are the first four letters in the plaintext passage? [3]

.....
.....
.....
.....

(iii) The 800th letter in the transmitted text is **W**. What is the 800th letter in the plaintext passage? [2]

.....
.....
.....
.....

THERE ARE NO QUESTIONS PRINTED ON THIS PAGE.
